

SABR™ Scanner

A Revolution in Scanning Productivity

*The SABR Scanner
is the newest
innovation in
scanning technology
from Datachecker,
the world leader
in scanner
design and
manufacture.*

*T*he SABR™ Scanner (Side Acquisition Barcode Reader) from Datachecker is the first major innovation in bar code scanning since counter-mounted scanners were introduced over ten years ago.

Developed for Europe as a super-productivity scanner to meet the world's strictest ergonomic standards, the

SABR offers unparalleled advantages in convenience and accuracy for North American applications.

It combines Datachecker's proven BDI Scanner technology for unexcelled read rates with a side-reading configuration that results in a quantum leap in scanning productivity. Tests of the SABR show that inexperienced clerks achieve high speed quickly without special training, while expert clerks soon surpass their old slot scanner throughput rates.
